Streamline your fluid power system!

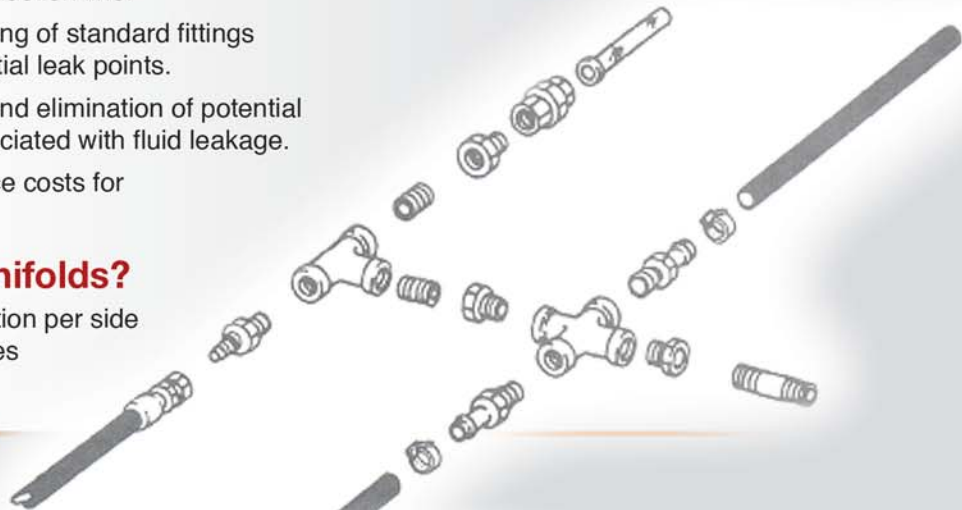

Fluid Line Products can assist you in making your fluid power system neater, drier, and more efficient.

The benefits of manifolding are:

- Reducing labor costs associated with assembly on the production line.
- Eliminating the stacking of standard fittings and numerous potential leak points.
- Increased reliability and elimination of potential warranty claims associated with fluid leakage.
- Reduced maintenance costs for dealer service.

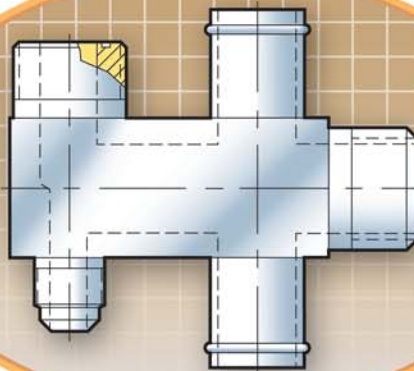

When to use manifolds?

More than one connection per side and/or more than 4 lines coming together.

One manifold can replace many system parts.

Crafted of steel, brass, stainless steel or aluminum.

Reduce your system costs 20-80%!

Send us your plumbing diagram or call our engineering department.
We'll show you how **ONE** well-designed quality built component can **REPLACE MANY** and improve your bottom line.

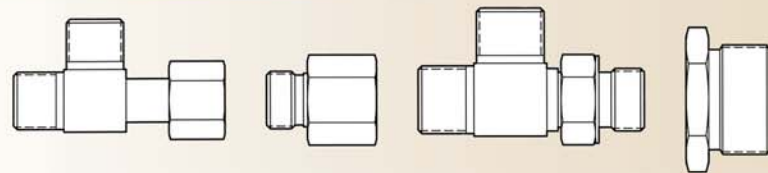

A simple manifold will let you join more than 1 line per side into a single piece.

Several connections can be combined in order to save space and eliminate stacking of fittings.

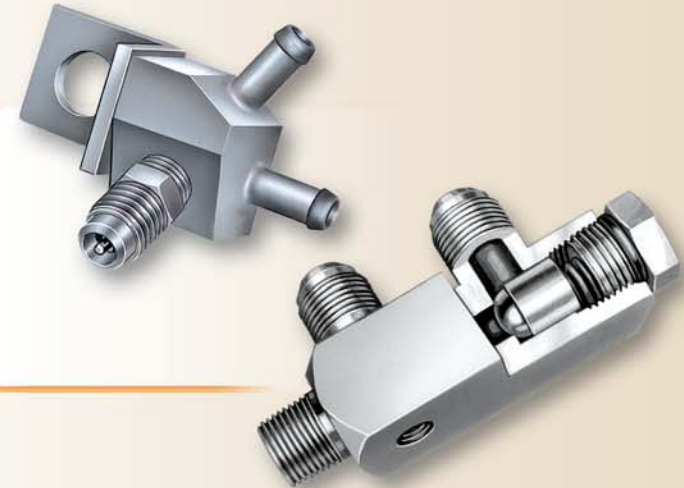

Manifolds can also reduce leak points, save weight and assembly time.

Adding a bracket or mounting holes will allow you to secure your manifold and lines.

Valving allows you to control your system pressure to help further reduce costs.

The addition of electronics turns your manifold into the "hydraulic brain" center for flow and pressure control.

Call or write us for more information detailing additional product lines manufactured by Fluid Line Products.

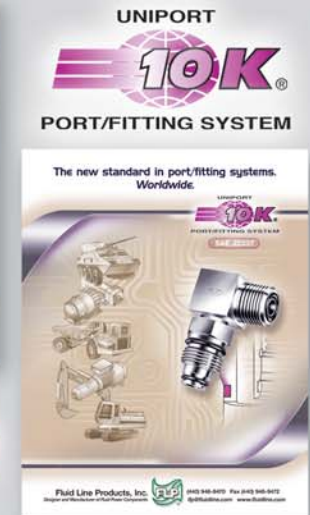

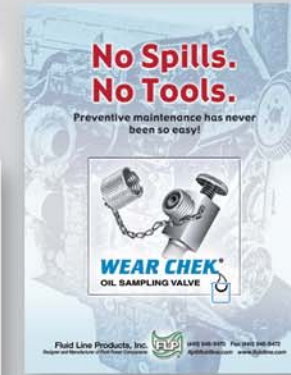

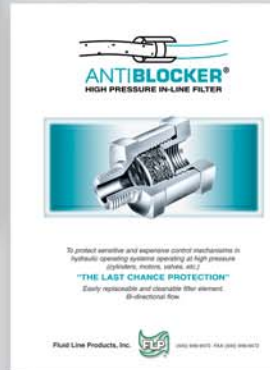

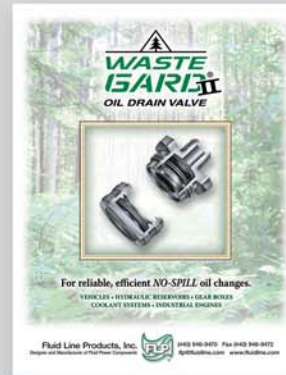

To our customers:

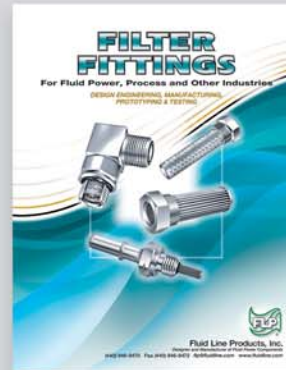

Fluid Line Products, Inc. specializes in designing and manufacturing manifolds and adapter blocks. Whether you need new components, replacement parts, or have a special request, our design experience will provide you with a reliable product. We take pride in designing and manufacturing quality products that reduce cost and enhance performance.
